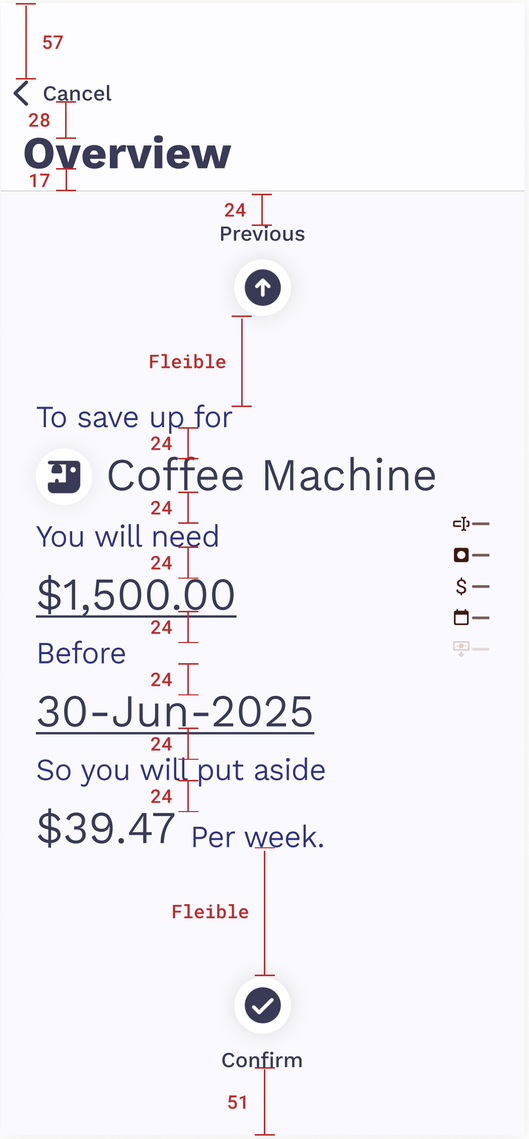
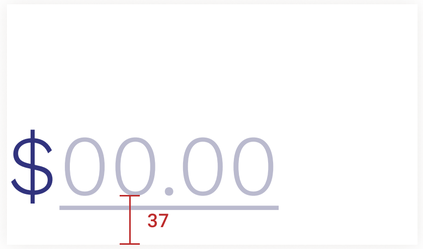
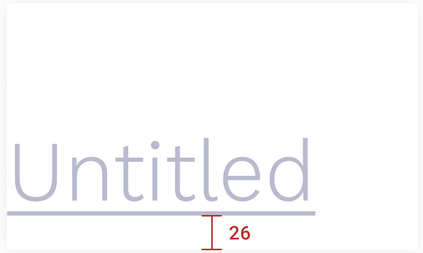
Goal Overview

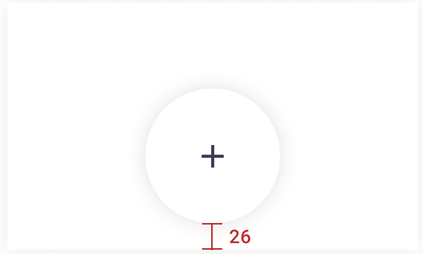


Grids and Spacing

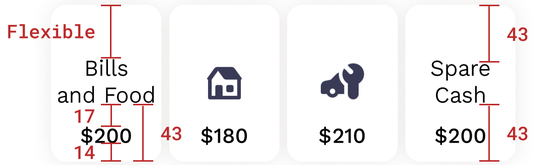
Goal Content (Variations)



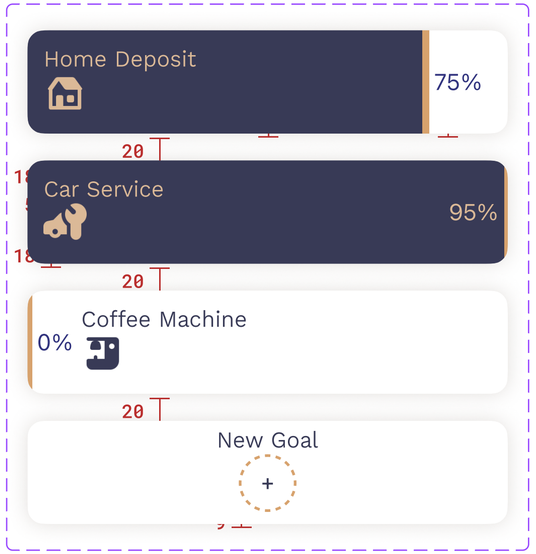




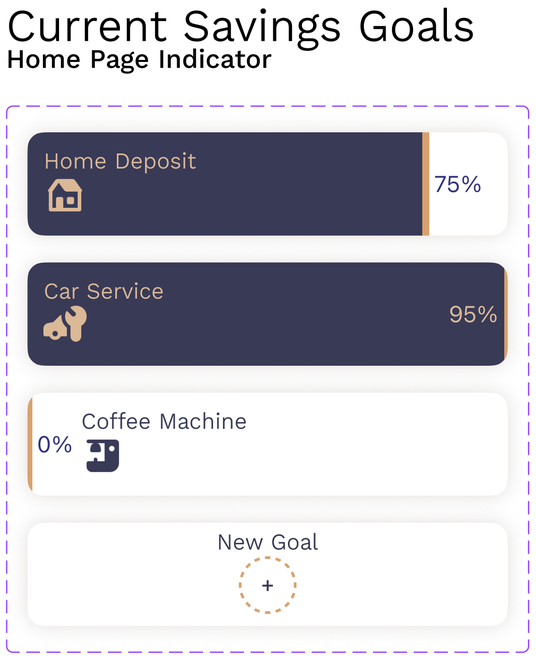
Home Screen Spendings Overview



Savings Completion



Component Documentation



1. The name and icon of the savings goal is found on the left of the progress bar
    a. If the Blue fill is not long enough to encompass this information, this information is placed to the left of the Blue fill and anything attached to it.

2. the Blue fill indicates goal progress
    a. Blue fill is accompanied by the percentage complete, to the left of the bar
        i. If the percentage to the left will overlap, the percentage will be inset to the progress meter
    b. Also accompanied by a more saturated gold termination marker

3. Text elements found in this component are complimentary to their background, following these rules:
    a. Gold/beige on blue (fill)
    b. Blue on white (Background)

4. Below these savings goals will always be a ‘new goal’ button
    a. Text and icons in this button are centred, with the text above the icon

Component Documentation

Sidebar ‘Completion’ Indicator

Navigation Indication

1. The name, icon and expense of the expenditure is always displayed in the middle, ordered top to bottom as mentioned.
    a. The amount of the expenditure will always be bottom aligned
    b. If the goal name will not fit snug with the icon in this layout, the goal name will be omitted.
        i. If this is to occur, all goals must follow

2. Each element must remain the same size as every other element

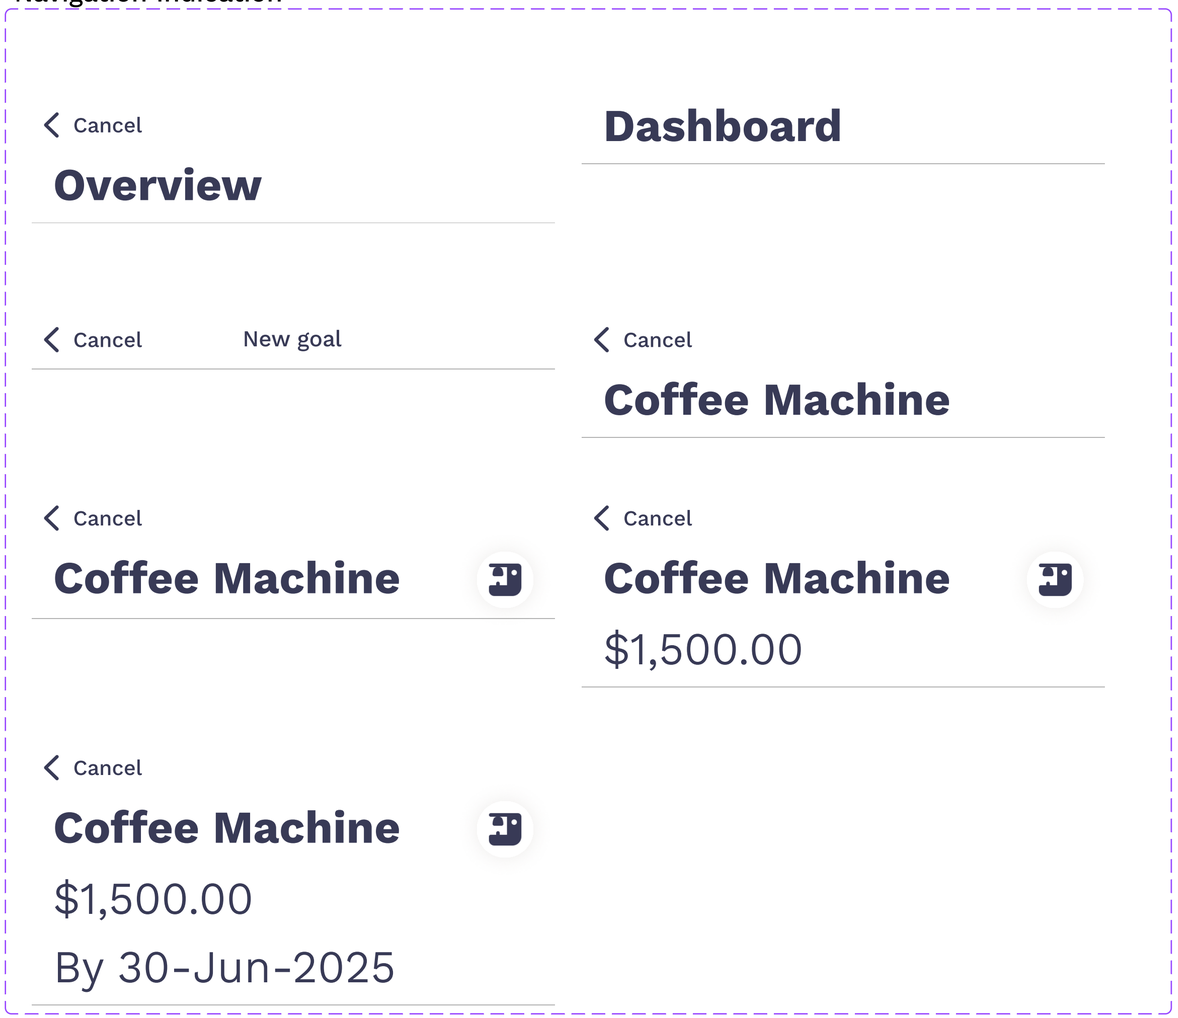
3. ‘Bills and food’ or appropriately named expense is always to the left of goal-based expenditures
    a. These user-set expenditures do not need to contain an icon

4. ‘Spare cash’ is always displayed to the right, in the same visual formula as the ‘bills and food’ expenditure

Component Documentation

Top ‘page Indicator’ Bar

Navigation Indication



1. The position of this indicator is always found at the top of the screen
   a. The vertical safe-zone of the screen will conform to this element.
   b. The vertical safe-zone of this element may be adjusted based on device features (e.g. notch, dynamic island, pinhole camera)

2. The vertical size of this element will expand to conform around the elements inside it
   a. There is a padding applied to the top and bottom of the content
      i. 3px on the top
      ii. 8px on the bottom
   b. Additionally, there is an inside stroke for just the bottom
      i. Black, 30% opacity
      ii. 0.33 px width

3. The cancel button is present when necessary, at the discretion of the designer.

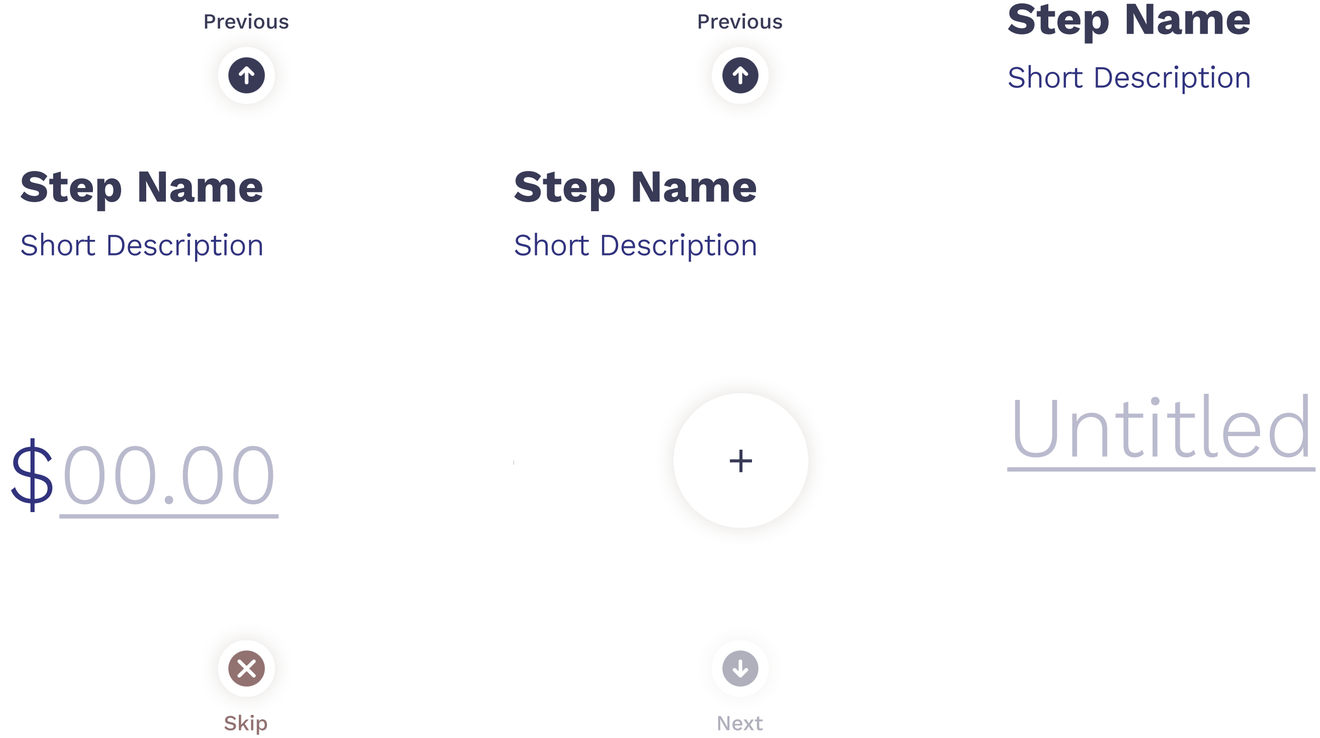
4. The setting of the title of the current page depends on the intent of the header in subsequent screens;
   a. H1 if:
      i. If there are no screens to follow
      ii. there are no screens following that will contain additional elements in the header
   b. Body emphasised if:
      i. The following screen(s) intend to introduce additional elements

5. Additional elements may be introduced as necessary, following these rules:
   a. Use H1 sparingly, to entitle the section of interactions
   b. Use any other Text Styles to indicate additions to the title.

Component Documentation

On-Screen Body Content Template

Task Completion (Variations)



This element can be used in conjunction with the sidebar completion indicator

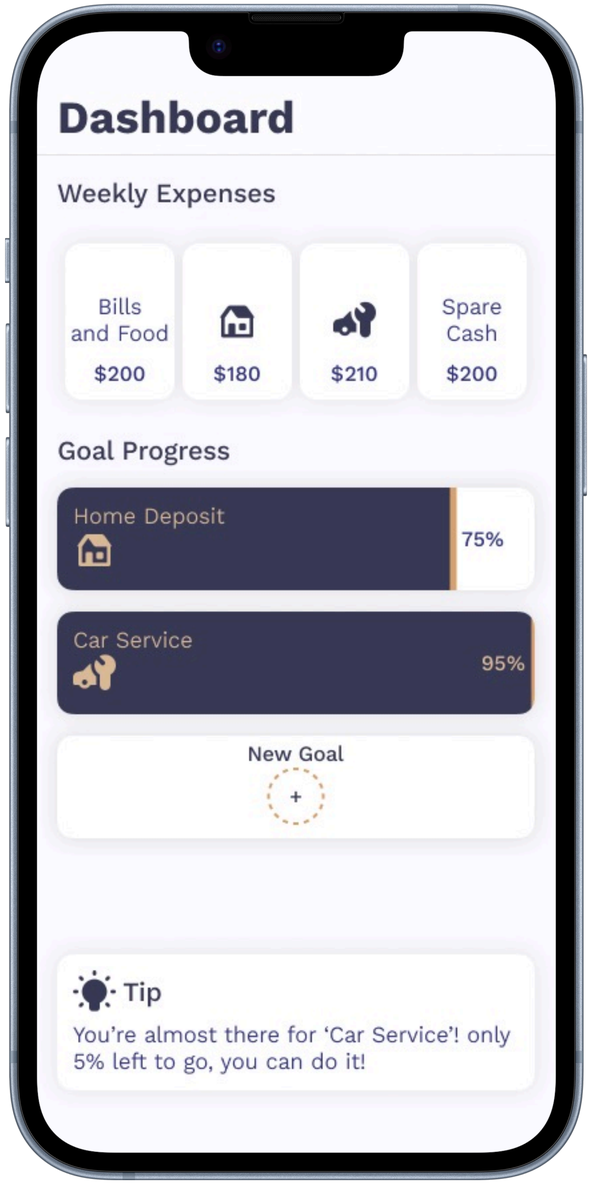
The content contained within the template may be edited with some limitations

1. Large input fields must use the Text Style ‘Large Field’
    i. The default colour of these fields must be ‘Text Empty Field’

2. If there is a keyboard or other obstructing element on screen that takes a large amount of vertical on-screen space, the navigation indicators may be removed to provide more space for elements.
    a. So long as the action causing the on-screen element to appear is reversible within a single click.

3. The contents of the navigation indicators may be edited to contain the function of the action.
    a. If the user is able to skip an element, the colour of the ‘next’ button must be ‘Cancel’
    b. If the user may not proceed without altering the title, the subsequent navigation button must be set to 40% opacity, and the drop shadow must be removed, to draw emphasis away.

Problems and Solutions

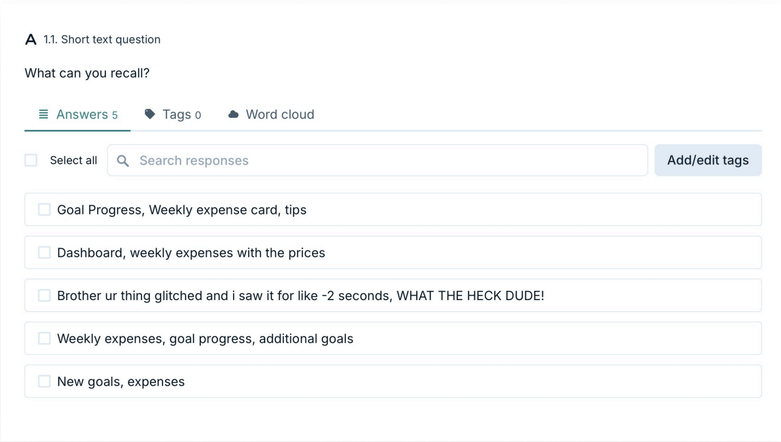


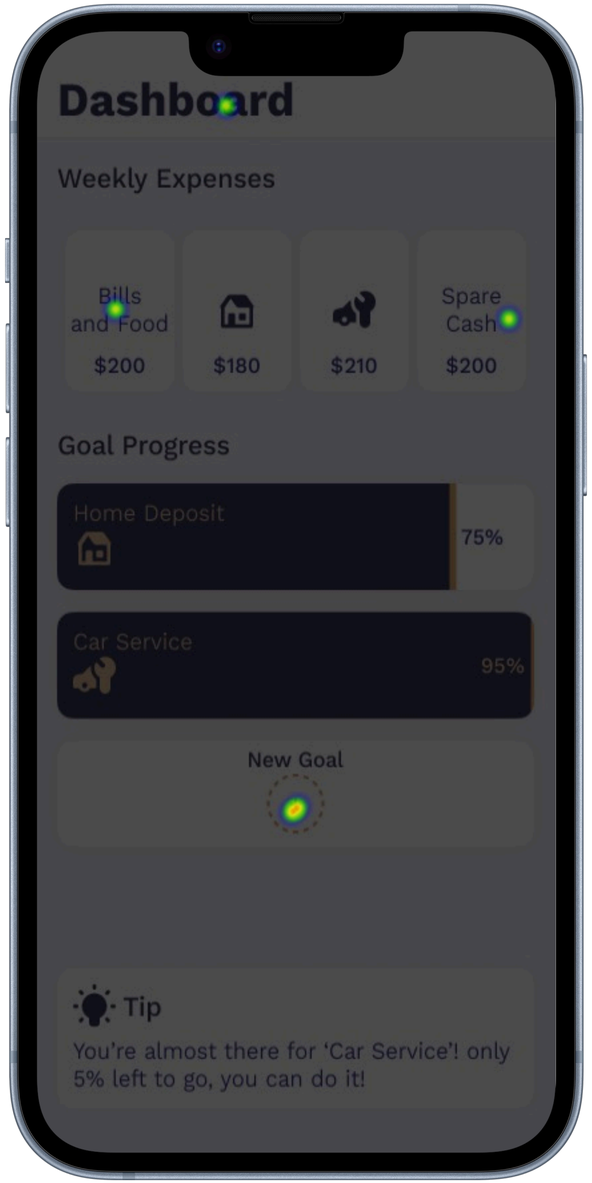
5 Second Test

Discovery:

This test was meant to uncover if the users could remember each part of the interface, or if there was something that was noticed too much, or not enough.

People Always wrote 'Goal Progress' first, then 'Weekly Expenses', however made no note of the expenses themselves. I want to take attention away from the name "Weekly Expenses" and focus more on the information present.





First Click Test

Where would you click to change your income

Discovery:

As suspected, there was no indication of a way to edit or even identify the income without adding each value of the expenses together, users were not able to find the 'edit' button they were looking for.

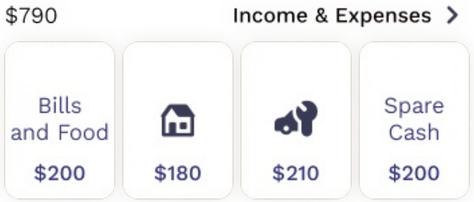
Reflection



Unfortunately, due to my poor test plan, i was unable to find anything significant to change regarding the 5 second test, since the solution was created for the first click test.

More-over, that solution was so basic, i wouldn't blame you for missing it. It was quite difficult to find a meaningful solution to this problem.

Due to time constraints, and already having re-made this test plan, i am regrettably unable to re-test these problems, therefore my solutions to respond to the testing have a lot in common.

Due to the brief requiring a first click test on the dashboard, and a 5 second test on the most visually complex screen, and my design's lack of more complicated screen, this testing only yielded minimal results. As such, i am overall unsatisfied with the result, as i'm sure you are, and frustrated that i didn't have enough time to produce meaningful results.
